AB - J03170575 Synthetic rubber tacky adhesive compsn. comprises a thermoplastic block copolymer, a tackifier resin and cyclodextrin as deodorant

- USE/ADVANTAGE - The compsn. contains tackifier resin which imparts strong adhesive property to the adhesive but has peculiar offensive smell. The offensive odour is drastically reduced, by the cyclodextrin, so the adhesive can be used in the food field.

- In an example, an adhesive compsn. comprising 100 wt. pts. SIS block copolymer, 100 wt. pts. aliphatic tackifier resin, 50 wt. pts. naphthenic oil, 1 wt. pt. antioxidant and 3 wt. pts. (1,2 wt%) alpha-cyclodextrin was coated on kraft paper for adhesive tape to 40 micron adhesive thickness. The adhesive tape gave 1839 g/15 mm SP tacky adhesive force (JIS Z -0237-8), 8 as tackiness (steel ball used for measurement: 1/32 inch in dia.), over 1440 min. retentive force and there was no bad odour in the tape at all. (5pp Dwg.No.0/0)
